

Your username and password are the same as your Bucks County I.U. username and password. Check with your librarian if you are not sure of your BCIU username and password.

Discovery Education streaming allows users to search for myriad media assets: full videos, video segments, audio clips, images, text articles, etc. Users search by keyword and can drill down to specific types of media.

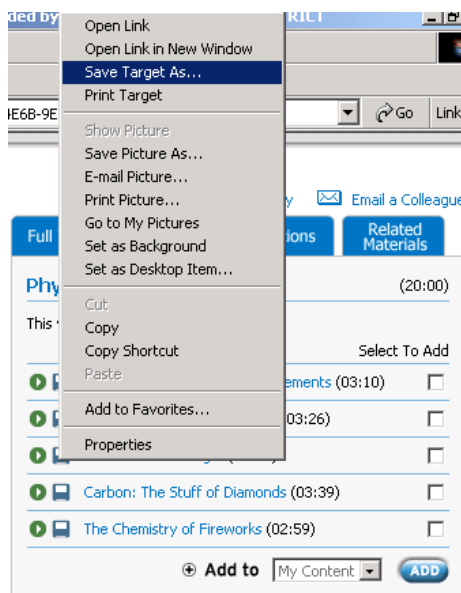

CB hosts DE streaming content on a local server. Content is added to the CB server as teachers request. To request a video or video segment, click on the Clock icon to add it to the download queue. When you add it, the icon will change to a Blue Down Arrow. The video will be downloaded to the CB server over night and should be available for classroom use the following day.

Suggestion: Click on the Select to Add box to add the video to your playlist so you can find it easily to download the next day.

To download a video to your computer or removable storage device, right-click on the blue “disk” icon and select “Save Target As.” You will now be able to access the video file without having to stream it from unitedstreaming. You can also embed the video file directly into a PowerPoint presentation or Inspiration chart.

Why can't users download during the day?

- Downloading and streaming directly from DE streaming slows down the entire district's Internet connection during peak times.
- Videos downloaded to the CB server makes them available to everyone.
- Video files are very large. Downloading videos to a central server eliminates wasted disk space.
- Streaming or downloading videos from a local server is faster
- Downloading videos or clips from the CB server to an external storage device such as a USB/Key/Thumb drive is more reliable and allows for greater flexibility of use.
